DISCUSSION

As written in Office action issued by the Korean Intellectual Property Office on the 20 December 2005 in applicant's corresponding Korean Patent Application corresponding to applicant's above-captioned U.S. Patent Application, **Jeong'KR766** relates to a remote-controlled computer system, and more particularly, a control apparatus for a monitor and a personal computer and a control method thereof. The present invention comprises a short-key and a set-up key of the short-key. The short-key of a remote control stores operating orders and so on to control a computer body and a monitor. The set-up key of the short-key is allowed to output the stored order etc. on a OSD screen of the monitor whenever a user wants. Thus, while viewing the output on the screen, only with the remote control, the user can simply activate various functions without conventional complex steps because the functions the user wants to work are activated by operating simply the numbers stored on the short-keys. Also, those who are not familiar with the computer can process a variety of functions of the computers by only using the remote control.

Kim'KR783 relates to short-key input control apparatus of a television, which comprises a functional item group and a remote control. The functional item group comprises general functions of the television by a short mode. The remote control plays a role to select predetermined functional items by short-keys when the functional items are displayed on a screen.

The citation of the foregoing references is not intended to constitute an assertion that other or more relevant art does not exist. Accordingly, the Examiner is requested to make a wide-ranging and thorough search of the relevant art.
